Test the Integration

As part of the **System Verification** stage, you can start to **execute test cases** after PayNet has verified all the necessary information you have provided.

CAUTION

Disclaimer: PayNet may add more relevant or remove obsolete test cases from time to time.

Step 1: Click **View Test Suite** button to view the details and test cases of the specific service.

Step 2: Within the specific test suite detail page, you can provide the necessary configuration details, view and execute the test cases.

Step 2.1: In the **Configuration Management** section, you must provide the necessary information in order to proceed with executing the test cases. Click **Complete Configuration** button to save and submit the information entered. Once you have completed the necessary configuration, you

can proceed with **executing the test cases**.

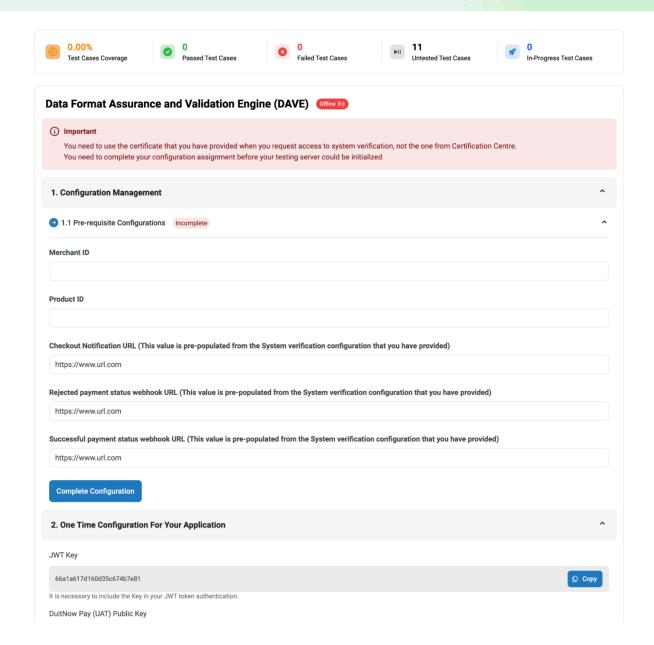

Step 2.2: In the **One-Time Configuration For Your Application** section, you can get the corresponding **public key from PayNet** for your transaction verification.

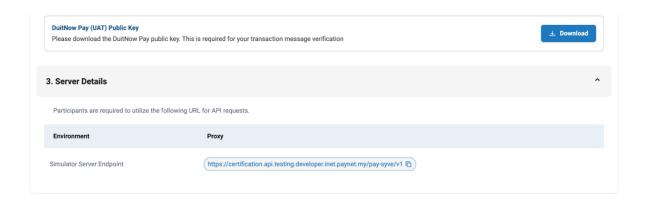

Note: This public key is corresponding to the certificate uploaded in the **System Verification Server Configuration** step.

List of test cases currently available to you!

Project ID: 66a1a617d160d35c674b7e81

Note:

The test cases provided are grouped by Type:

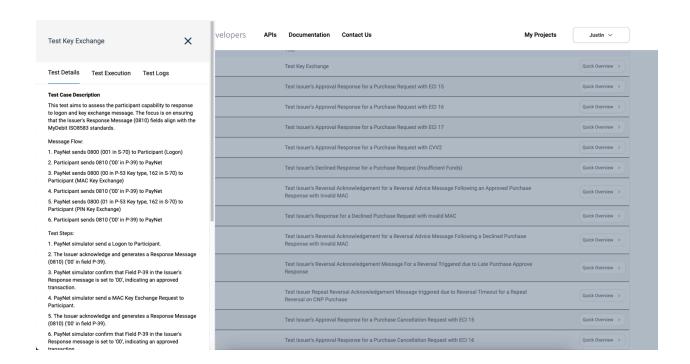

Туре	Definition
Pre-requisite	This test case must be passed before you can proceed to another test case.
Mandatory	This is a mandatory test case to pass.
Optional	This is an optional test case to pass.
PayNet- Assisted	This requires assistance from PayNet to run the test case.

Step 2.3: At anytime, you can view test case details.

Step 2.3a: To do a quick glance with a side bar, click the Quick Overview button.

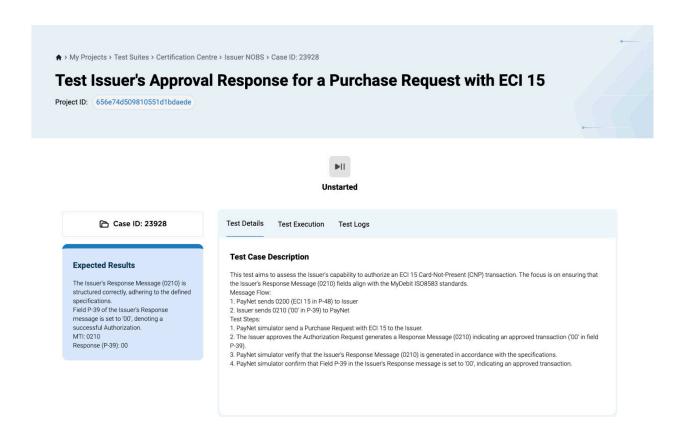

The details will be displayed on left-side of the page.

Step 2.3b: Alternatively, you can view it in a full-page mode by clicking on the title of the test case.

The details of the selected test case will be displayed. You can view the test case description, expected results, and initiate to execute this test case within this page.

Step 3: You must **complete all the test cases** in System Verification in order to proceed to go live.
