IP & Domains

Your application must be able to reach any of PayNet's fully qualified domain names for it to function properly. Depending on how your integration operates, you may need add them to an allowlist.

If your application also receives webhooks from us, you need to make sure these events originate from a PayNet webhook IP addresses.

PayNet Domains

PayNet is using Cloudflare as it's network proxy. Depending on participants infrastructure/operating setup, you may require to whitelist the Cloudflare IPs and PayNet domains as part of allowed "Destination" IP/Domain:

You may refer to Cloudflare on the full list of IP addresses that PayNet may resolve to.

PayNet Domain:

Environment	Domain
UAT	*.uat.inet.paynet.my
PROD	*.prod.inet.paynet.my

Webhook Notifications

Participants may require to whitelist below IPs and Domain as part of allowed **"Source"** IP/Domain, in order to receive Webhook call from PayNet.

(i) INFO

We strongly encourage participant to setup an operating model that do not resort to such whitelisting approach, as PayNet may change our IPs from time to time.

PayNet Domain:

Environment	Domain
UAT	*.uat.inet.paynet.my
PROD	*.prod.inet.paynet.my
